HOLLYHURST GARDENS
J. Stuart Cooley, Prop., RR, Box 70, Berwyn, Maryland
Catalog No. 4, January 1946

DAY LILIES

Varieties and Season of Blooming

Daylilies, in their many and diverse varieties, have an important place among present-day perennials. They offer a unique combination of ease of culture, floriferousness, fine flower form, exceptional shades of coloring and long blooming season. They are deservedly becoming more popular every year. The possession of daylilies will give lasting satisfaction.

In selecting varieties to list from the large number of varieties now offered we have considered quality rather than quantity. The varieties here listed have been chosen for their color, season of blooming, duration of flowering, high quality of flower, and good garden performance in this locality. The time of blooming varies somewhat from year to year but one can roughly classify the varieties into four groups: viz, early, early mid-season, mid-season, and late. In the vicinity of Washington, D. C., varieties marked "e" (early) bloom within the period of May 2-31; those marked "e m" (early mid-season) June 1-30; those indicated by "m" (mid-season) July 1-20; and those marked "l" (late) July 20 until frost. The mid-season varieties produce the finest flowers.

Instructions for Ordering and Planting

We take pride in our list of fine varieties and in supplying, at a reasonable price, strong, vigorous plants. All of our stock is guaranteed true to name. If a mistake should occur adjustment will be promptly made. Postage will be paid on all orders of \$2.00 or more. Prices by the dozen of a kind on application. If plants are dug and shipped soon after blooming, they should bloom the next year. Late fall planting is not advised where the weather is cold enough for winter injury to be a problem. Plant in a deep fertile soil.

New Varieties Introduced by H. P. Traub

The introductions of Dr. H. P. Traub, a noted breeder of daylilies, are considered by connoisseurs to be outstanding. Such varieties as Mayor Starzynski and Lidice are fine for their garden effect, while Mildred Orpet, Geo. Kelso, Carnival, and Duchess of Windsor add color harmony in the garden with their lighter shades. His Dr. Stout variety combines shapeliness of flower form and a pleasing blend of red and gold, with especially charming effect. It should be in every collection.

	<u>EACH</u>
BERWYN (Traub and Cooley 1945), m, bright carmine; yellow throat; bright and attractive	\$15.00
CARNIVAL, m, Moro red; large orange throat	3.00
